

ENZYME PRO™

Notes

PROTEIN ENZYME FORMULA

ENZYME PRO is a clinically developed, balanced formulation of specific protein enzymes derived from bacteria and fungus in combination with symbiotic bacteria which also produce necessary enzymes. The relationship is symbiotic because the enzymes, due to their immediate reaction on food, make nutrients available to the bacteria. The bacteria are then able to colonize the intestine more readily, begin producing enzymes of their own and, due to more complete digestion, provide the body with nutrients that would otherwise have been lost. The activity of ENZYME PRO, therefore, is to supplement inadequate protein digestion by the small intestine and provide viable strains of specialized bacteria which assist the process and also colonize the intestine.

INGREDIENTS:

Each capsule contains:		% Daily Value
In a proprietary blend of:	124 mg	*
Protease enzymes and probiotics		

*Daily Value not established

Other Ingredients: Gelatin (capsule).

No corn, soy, salt, yeast, egg, sugar, whey, milk, colors, chemical additives, or preservatives.

INDICATORS:

ENZYME PRO was developed to provide a non-pancreatic source of effective proteolytic enzymes and to improve overall protein digestion. ENZYME PRO is recommended in cases of protein toxicity, characterized by local infections, stiff joints, inflammations, and general toxicity. It was discovered that due to the efficiency of the product, people were experiencing less requirement for protein. As a result, ENZYME PRO is also an effective supplemental enzyme product for the conversion to and maintenance of vegetarian diets. ENZYME PRO has proven helpful for correcting some of the following:

1. Congested feeling after eating protein.
2. Vegetarians who crave sweets, peanut butter, cookies, bread.
3. Chronic fungal infections.
4. Chronic sinusitis, ear aches, arthritis, hardening of the arteries.
5. Lower bowel foul smelling gas within 2 to 4 hours after eating.
6. Skin problems, cysts, isolated pimples, folliculitis, verruca, systemic toxicity.
7. Allergies and food sensitivities due to protein intolerance.

Potency Guaranteed: All the bacteria in this product have been included at their most effective clinical potency, and will maintain this potency at room temperature for 1 year from purchase. Refrigeration will assist in maintaining this potency.

DIRECTIONS:

As a dietary supplement ENZYME PRO should be taken with some caution since the increased protein absorption can overload the liver. Begin with 1 capsule before 1 to 2 meals a day for a minimum of 1 week, or as directed by a physician. Eventually, increase to 1 to 2 capsules before each meal as liver function improves. Once a normal protein-digestive-enzyme cycle is established, reduce the dosage to 1 capsule before meals containing protein (meat, fish, eggs, poultry, milk products, beans and legumes; avoiding peanuts, nuts, seeds, and soy for at least 2 weeks) for 1 to 3 months. If a vegetarian diet is the goal, then eventually add Enzyme F/S to insure adequate availability of protein from vegetable sources.

CAUTION: DO NOT take if history of ulcers or gastritis.

COMBINATIONS:

L-G-K-S — if the liver is initially unable to process the increased availability of digested protein, symptoms of nausea, fatigue, and skin reactions may occur

ReBuild — to assist the development of the intestinal lining if allergies are present

Aloe Vera Gel — if the intestinal lining is not adapted to normal levels of proteolytic enzymes

Formulated by Dr. Norman Easley.
